### **BIOIONIX NEW U.S. PATENT ISSUES - INTERNATIONAL PATENT PENDING**

MADISON, Wis., April 25, 2006 - The U.S. Patent and Trademark Office today issued another new patent to BioIonix, Inc., a high-technology company based in Madison, Wisconsin. "This new patent gives our company very broad protection of our intellectual property," said Jim Tretheway, BioIonix president. "This is the second patent for our company. We also recently applied for two new U.S. patents that improve the energy efficiencies of our process and extend the applications of our technology to new markets."

In the past month the company also applied for international patent protection. "Our customers are worldwide. We're starting in North America, but over time we have our eyes set on world markets," added Tretheway. BioIonix makes advanced systems to disinfect and oxidize contaminants in a variety of liquid streams. Further information can be found on the BioIonix web site, [www.bioionix.com](http://www.bioionix.com).

#### **About BioIonix, Inc.**

BioIonix, Inc. is a high-technology company commercializing an energy-efficient process that solves serious biological disinfection and oxidation problems across a number of different industries. The company's patented technology utilizes high frequency electrochemistry to convert water into hydrogen peroxide and other reactive molecules. BioIonix products feature extremely low operating costs and small space requirements. The company is located in Madison, Wisconsin.
